Chris Zirzow, Vice President of Pharmaceutical Alliances at A-S Medication Solutions, LLC, is the clinical pharmacist who acts as a liaison between our physicians, regulatory, production, sales and customer service departments, so she is always up-to-date on the happenings in the medical industry.

Top-Selling Drugs That Are About to Lose Their Patent

This is the beginning of a great time for physician dispensing.

From <http://www.dailyfinance.com>; By: Melly Alazraki

The imminent arrival of the dreaded “patent cliff” has been haunting the pharmaceutical industry for years, and it’s finally here. With patents on many blockbuster drugs about to expire, an estimated \$250 billion in sales are at risk between now and 2015, according to data from EvaluatePharma.

Once drugs lose patent protection, lower-price generics quickly siphon off as much as 90% of their sales. For consumers, the savings from generics can be substantial.

In 2010, the pharmaceutical industry had sales of \$860 billion worldwide, up 3% from 2009. Just 133 blockbuster drugs accounted for \$295 billion of those sales -- about 34% of the market -- according to IBISWorld. Of those blockbusters, 13 are set to lose patent protection through 2013.

According to IBISWorld, the top ten best-sellers set to lose patent protection are:

Exp 2011	Condition	Company	Exp 2012	Condition	Company
1. Lipitor	cholesterol	Pfizer	5. Plavix	anti-platelet	Bristol-Myers Squibb /Sanofi-Aventis
2. Zyprexa	antipsychotic	Eli Lilly	6. Seroquel	antipsychotic	AstraZeneca
